

Propellerhead Announces Reason 8.2 Update

Stay up to date and get many of your most requested features

Stockholm, Sweden, April 2 – Propellerhead Software today announced the release of Reason 8.2, the most recent update of the award-winning Reason music production software. The latest update makes it even easier for new and existing Reason 8 customers to download, install, and stay up to date with the latest version.

Eliminate the hassle of bulky manual installs with the new convenient auto-update feature. Reason now detects and downloads the most recent eligible software updates so you'll always have the latest and greatest version. Download and get up and running faster. A typical Reason update (minus the soundbanks) will now be around 100 MB—a tenth of its old size.

The Reason 8.2 update addresses many requested features including Revert browsing—a new workflow in Reason's browser that will be familiar to users of previous versions—more colors in the sequencer, expanded Remote support for Redrum Drum Machine, streamlined sound bank handling and more.

Reason 8.2 also gives you access to the newly introduced Propellerhead music-making service, which is continually updated with new features and functionality based on customer feedback. This free music making service connects the free Figure and Take mobile apps with the award-winning Reason music production software, so you can create, share, collaborate and remix with other musicians around the globe.

Pricing and availability

Reason 8.2 is a free downloadable update for Reason 8 owners only.
